Large Attendance at Gas Meeting

W. H. PECK.

Special to The World

CLEVELAND, Ohio, May 20.

The first session of the Natural Gas Association of America opened with the largest attendance in the history of the association, and was given a royal welcome by Mayor Davis of Cleveland, who made it strong when he presented a monster key to the city and said, "You are the best people on earth."

Leo Well of Pittsburgh responded to the mayor's address in behalf of the company and was followed by Judge R. M. Vaughan, who introduced resolutions honoring the members of this republic in the world's work for humanity.

Tomorrow's program includes an address by Franklin K. Lane, secretary of the interior, and the officials of the Petroleum Institute, with a dinner at Holleman hotel. Martin P. Daly, well known in Tulsa, will preside as toastmaster.

The display made by the supply man and manufacturers is to be the largest and most complete of any meeting of the association. Messes Braden, Sharpe, Leonard, Bradford and others arrived from Tulsa this morning.

Phillips Completions and First Reports

The Myers No. 12 in 8-13-14 is making 20 barrels a day in the sand found from 445 to 487 feet.

The Wynn No. 3 in 19-27-8 is making 100 barrels a day in the sand from 4,426 to 4,454 feet.

The well in lot 159 in 1-26-11 is making 30 barrels a day in the sand from 785 to 820 feet.

In the Osage No. 12 in 7-24-14 is a rig, No. 13 in the same section is a rig building, No. 14 in the same section is a rig building, No. 15 in the same section is a rig building, No. 16 in the same section is a rig building, No. 17 in the same section is a location, No. 18 in the same section is a location, rigging up for No. 5 Phillips-McGraw and others in 8-24-10, rigging up for No. 4, on the same lease, and a rig is being built for No. 5 Phillips-Guy in 25-24-9, a rig is being built for No. 3 on the same lease and a rig is being built for No. 1 Phillips-Guy in 25-27-7, a rig is being built for No. 42 on lot 185 in 12-25-11, a rig is being built for No. 5 on lot 187 in 25-25-8, a rig is built for No. 9 in 15-25-11, No. 11 and 12 in 15-25-11 are locations. Lenses, Supplies, Production, Etc.

GREAT SALE IS BREAKING ALL RECORDS.

The Union Department Store 111-114 South Main, Tulsa, with its great stock of shoes just received from Kansas City and which has placed on sale at enormous bargains, is doing a landoffice business.

Just imagine for a minute the great variety of shoes that it contained in a shipment of 14,000 pairs. A great many of these are going at such low prices that it is a shame to quote them. This stock is composed of the stock of the largest shoe manufacturer in the central states. He has decided to move his plant from Kansas City to St. Louis and rather than pay the freight sacrificed them up. In this way we are enabled to pass on the savings at bargain prices. We can outfit the entire family. Come and see for yourself. Union Department Store, 112-114 South Main street—Adv.

WILSON SWAMPED.

Will the Germans sign? When they over this stroke of pen paralysis. Have you made any money lately? A little. Want to make more? Then Texas game game. Play it—\$100 up to \$1000. Might in and make a million. You and might just 2,000 barrel lease work. Our lease? No. Going to get one as big? Looks good. Want to play it?

OKLAHOMA STATE DEVELOPMENT ASS'N.
Basement Coden Bldg.—Adv.

We have a limited amount of dividend-paying shares also interests in well now drilling in the Youngstown pool, also adjoining acreage. All priced right. For location and further information call or phone 4323, Room 11 Turner building—Adv.

Omer K. Benedict, dealing in oil leases, can be reached in care of the Regus Oil Lease company, 405 Brady Bldg., San Antonio, Texas. He wishes to announce that he will gladly answer all inquiries pertaining to our leases in southwest Texas—Adv.

Will drill acreage that will bear careful investigation; shallow field off stuff not considered. Address C. D. Hotel Chelsea, Chelsea, Okla.—Adv.

FOR SALE—Producing properties and close in leases in the shallow fields of Oklahoma and Kansas. Description and full details furnished. Fuller & Mower, 322 Mayo Bldg., Tulsa—Adv.

WANTED—Producing properties and close in leases in Oklahoma. Want only thoroughly developed. Propositions that are priced right and will stand close investigation. P. O. Box 629—Adv.

Position as base foreman or good pumping job, close to school by man with 12 years experience, Tulsa reference. Address C-64—care World—Adv.

Have good drilling proposition in Osage. Phone 5323 or address Box 1951 Tulsa—Adv.

cation is made for No. 21 lot 195 east in 13-28-11, and a location has been made for No. 6 in 1-26-11.

Livington Corporation Increases Capitalization

An increase in capitalization in the stock of the Livington Oil Corporation from \$1,000,000 to \$3,000,000. The additional amount was voted at a recent meeting held here, and will go into effect the second of June. An announcement will be made of officers and new board of directors elected at the same time.

The company has been unusually active in the Hedges district and in Texas during the past few months, and have managed to get in some of the best stuff that is available in the two Continent districts at the present time.

Perhaps the most interesting of the present activities of the company is the drilling of the wells on the property offsetting the Texian Oil Company's big well recently completed in section 34-11-1 west of Hedges. They are spudding in the No. 5 test, offsetting the Texian well directly to the north, rigging up No. 4, one location north of five, and are through underdrilling the No. 3 just north of four, which is now down 2,300 feet, and has the sand.

A Rose Between Thorns'

The J. W. Moore well, soon well, located in the northeast corner of the south half of the southwest of section 11, which was drilled in more than six weeks ago, and is still reported making 200 barrels has been termed by one oil editor "a rose between thorns."

Thorn No. 1 protruded into the pocketbooks of Ed Moore and his associates last week when they failed to get the 2,500 foot sand in a direct east offset to the above J. W. Moore discovery well.

J. W. Moore, owner of the discovery well, has been buying the sand, which is a direct west offset to the discovery well. Late last night this hole had reached 2,520 feet, and was dry as a bone at that depth.

The owners of both these failures declare they will drill deeper in the hope of picking up another oil or gas bearing formation, and if the Okmulgee district lives up to its record of new wells they will probably pick up another.

Mr. Moore's northeast offset to his big well is reported on top of the deep sand, and arrangements are being made to give the formation a test today.

The fact that the east and west offsets are both "failures" in the "field" sand is a body blow to a locality which had the earmarks of showing some real class.

The latest authentic report is that the well is holding up for 80 barrels.

Cement Looks Very Promising

The excitement in the Cement field is said to likely surpass any that has been obvious in that district in that district in the past, during the summer months to come. The early excitement has died down and work is getting down to a purely legitimate basis, and although a great number of wells are still producing, the real oil men are becoming more interested, and the day of the promoter is sinking in oblivion. The Texas company is prepared to take the majority of the oil produced there at the present time, taking it by pipe line to Cement, and from Cement to other destinations by tank car, at a price per barrel like a rig producer.

Late News From Texas

(By Prentiss T. Moore)
DALLAS, Texas, May 20.—Unverified reports are current that Texas City well near Husky-Waggoner is still producing oil and gas, but weather has suddenly interfered with reports from the fields.

In Stephens county the Swenson-Dale Oil company's well on Pete Swenson ranch in Stephens county is about half way between Caddo and Breckinridge pools. Latest reports estimate it at 1,500 barrels. The next important well completed in Stephens county in sometime as it makes practically certain connection with the Caddo district. In the Caddo district the Sun company's No. 1 Rochelle half a mile south of the famous Mid-Kansas gusher on the Carey farm has been shot and is making about 200 barrels through a bad bridge. The same company is now completing an important well on the Jennings farm, half a mile south of the Veale well in southeastern Stephens county. The Jennings got the sand at 3,400 feet and immediately filled with oil. It looks like a big producer.

The Oklahoma Tool and Supply company have received their first shipment of Kewanee high duty oil country boilers, this boiler being made by the Kewanee Boiler Works at Kewanee, Illinois. It meets all state law requirements, something new and unique in design.

In Stephens county the Swenson-Dale Oil company No. 1 Swenson, about half way between the Caddo and Breckinridge pools is rated at 1,500 barrels. The next important well completed in Stephens county in sometime as it makes practically certain connection with the Caddo district.

In the Duke Knowles pool the Sun company's well on Pete Swenson ranch in Stephens county is about half way between Caddo and Breckinridge pools. Latest reports estimate it at 1,500 barrels.

It probably means connection of the two pools, which are now 8 miles apart. In the Duke Knowles pool Comanche county, the Peerless Petroleum company's well on the Carruth has been deepened and is making 3,000 barrels. Magnolia Petroleum company's Terrell, same

pool, is being drilled in 12-25-11.

Besides the oil drilling, the Oklahoma Natural is opening up extensive new fields and is making a market out of the best sources of gas for the coming winter in the state.

Bill Clark, Chief Scout for the Texas company, recognized king of Scouts in Tulsa, and author of the famous "Cushing Bible," is spending almost all of his time in the element field, and has something new to tell about it every time he comes to town, which is about once a month. While he does not predict that this field will be an extra-heavy one at all, "Bill" is of the opinion that it is going to be a pretty fair little center of production.

Late Garfield County Reports

The Coden Oil & Gas company and the Marland Refining company's No. 25 well on the wheat lease, in the southeast of 13-22-4w, has the sand from 1,912 to 1,927 feet, and is showing for a 50-barrel well.

The Garber Petroleum company's well on the Simmons farm in 33-23-3w, east of Garber, drilled into a stray sand at 2,330 feet, according to a late report, and has had a slight showing of oil at that depth. There is not enough oil to pay, however, and it will probably be abandoned.

The Coode Oil company's No. 4 well on the Lynde farm in 7-22-3w has been drilled into the 1,300-foot sand, and is showing for about a 500-barrel producer. This is the biggest well yet drilled in the northern extension to the Garber pool on the north Lynde farm.

The Sinclair Oil & Gas company's well on the part of the pool in the northeast corner of the northwest of 13-22-4w is making about 75 barrels

per day. It is offsetting the No. 1 well of the Van Winkle oil & Gas company on the Lewis farm in section 14-22-4w. The sand depth is from 2,112 to 2,224 feet. The same firm has just completed its No. 2 on the Laqua Crews lease, good for 100 barrels in the 2,190-foot sand.

Magnolia Notes Peril Burk Burnett Overproduction

BY PRENTISS T. MOORE
Special to The World

DALLAS, Texas, May 20.—The probability of an early increase in the output of the northeast pool which might be sufficient to cause a temporary over-production of oil there and perhaps result in serious disadvantage to that pool unless drilling is done in more moderation.

The Magnolia Petroleum company, one of the two major pipe line companies affording an outlet for oil produced in the state, was summoned by the Burk Burnett oil company to Frank Bell, of Wichita Falls, Texas, where the letter was made public today.

The Magnolia Petroleum company addressed Mr. Bell as a large producer of Burk Burnett crude and asked his cooperation and that of other Burk Burnett producers to keep drilling within reasonable bounds.

It is pointed out that much of the oil produced in the new territory that has been recently opened up is in small fields and the owners apparently are trying to do everything possible to get all of the oil out of the ground right now. It is pointed out that pipe lines and storage tanks are already pretty well occupied with taking care of the present output of the pool.

The production of the Burk Burnett pool is now approximately 60,000 barrels daily. More than 200 new wells have been completed in the last few months, mostly in the new territory opened by the Burk

Waggoner and other big wells.

In the Demopolis or Duke-Knowles district north central Texas, the Peerless Petroleum Production company No. 1 is in the northeastern edge of the pool has been drilled 17 feet deeper and is producing 2,000 and 4,000 barrels of oil and 30,000,000 feet of gas. This well is about a half mile southeast of the Magnolia's No. 1, Terrell, which is still producing 50 barrels, these two wells add enormously to the importance of this district.

In the same territory the Southland Oil company No. 1 Vaughn, about half way between the Caddo and Breckinridge pools is rated at 1,500 barrels.

The next important well completed in Stephens county in sometime as it makes practically certain connection with the Caddo district.

In the Duke Knowles pool the Sun company's well on Pete Swenson ranch in Stephens county is about half way between Caddo and Breckinridge pools. Latest reports estimate it at 1,500 barrels.

It probably means connection of the two pools, which are now 8 miles apart. In the Duke Knowles pool Comanche county, the Peerless Petroleum company's well on the Carruth has been deepened and is making 3,000 barrels. Magnolia Petroleum company's Terrell, same

pool, is being drilled in 12-25-11.

Besides the oil drilling, the Oklahoma Natural is opening up extensive new fields and is making a market out of the best sources of gas for the coming winter in the state.

Bill Clark, Chief Scout for the Texas company, recognized king of Scouts in Tulsa, and author of the famous "Cushing Bible," is spending almost all of his time in the element field, and has something new to tell about it every time he comes to town, which is about once a month. While he does not predict that this field will be an extra-heavy one at all, "Bill" is of the opinion that it is going to be a pretty fair little center of production.
